

Energy: Sierra Club Cites InsideEV Report Noting Record Breaking Sales of Electric Vehicles in 2015

Arkansas Environmental, Energy, and Water Law Blog

01/11/2016

The national environmental organization, Sierra Club, issued a January 7th news release stating that a record number of electric vehicles were sold in the United States in 2015.

Sierra Club cited InsideEV's "scorecard."

The news release stated in part:

Yesterday, final numbers of U.S. electric vehicle sales for the 2015 year were released showing that despite low gas prices, a record-breaking 13,650 electric vehicles were purchased this past December, the largest sales month ever.

The sales figures are stated to represent a greater than 10% increase from the previous December.

The Tesla Model S Chevy Volt, Ford Fusion Energi, and BMW i3, i8 and X5 showed increased sales.
