

Broad Coalition Of States And Localities Urge Continued Defense Of Clean Power Plan In Letter To President-Elect Trump

Clean Power Plan Builds On Successful State And Local Efforts To Reduce Emissions While Creating Jobs And Growing Economies

Schneiderman: The Science Is Clear – Too Much Is At Stake To Turn Back The Clock On Climate Efforts

NEW YORK - A broad coalition of 19 states and localities, led by New York Attorney General Eric T. Schneiderman, called on President-Elect Trump to continue the federal government's defense of the Clean Power Plan in a letter sent today, urging him to reject "misguided advice" from a group of Attorneys General led by West Virginia to discard the plan,

The letter details why the Clean Power Plan is vital to efforts to limit carbon pollution, and pushes back against ill-conceived efforts to urge the President-Elect to unravel the plan -- which, the letter explains, would be contrary to the law.

"States like New York are on the front lines of climate change – and have demonstrated how to cut pollution and emissions while protecting affordable and reliable electricity, creating jobs, and growing our economy," said **Attorney General Schneiderman**. "The Clean Power Plan builds on that successful work and is a blueprint for the critical action needed to fight climate change's devastating environmental, economic, and public health impacts. The science is clear and far too much is at stake to turn back the clock on our climate efforts."

In November 2015, the Attorney General, leading a coalition of states, cities and counties, intervened in defense of the Clean Power Plan against legal challenge in the D.C. Circuit Court of Appeals. The court heard oral argument for a full day in late September; a decision is expected soon. In the letter, the coalition vowed to oppose any attempt to send the rule back to EPA prior to the court issuing its decision.

The Clean Power Plan is the culmination of a decade-long effort by New York and partnering states and cities to require mandatory cuts in the emissions of climate change pollution from fossil fuel burning power plants under the Clean Air Act. The Clean Power Plan, along with the companion rule applicable to new, modified, and reconstructed power plants, will control these emissions by setting limits on the amount of climate change pollution that power plants can emit. The rule for existing plants is expected to eliminate as much climate change pollution as is emitted by more than 160 million cars a year – or 70% of the nation's passenger cars.

EPA adopted the Clean Power Plan through a multi-year stakeholder process that drew heavily on the experience of states and utilities in reducing power plant greenhouse gas emissions. A number of states, including New York, have already taken a leading role in reducing greenhouse gas emissions by moving forward with their own programs.

New York and eight other states are part of the “Regional Greenhouse Gas Initiative” (RGGI), which has reduced regional carbon dioxide emissions from the electricity sector by 40 percent from 2005 levels. The RGGI states have shown that by a combination of encouraging shifts to less carbon-intensive fossil fuel generation, increasing reliance on renewable energy, and using proceeds to invest in energy efficiency, substantial reductions in carbon dioxide emissions are possible over a relatively short period, while supporting economic goals and maintaining grid reliability. An independent analysis found that in the first three years of the RGGI program, the reinvestment of allowance auction proceeds is reducing total energy bills across the region by \$1.3 billion and adding \$1.6 billion to the regional economy, creating an estimated 16,000 jobs in the process.

December 28, 2016

Donald J. Trump
President-Elect of the United States
Trump Tower, 735 Fifth Avenue
New York, NY 10022

Dear President-Elect Trump:

Our states and local governments are on the front lines of climate change. We see firsthand the significant human and economic costs inflicted by unchecked carbon pollution: whether it is harms from severe drought in California, catastrophic storm surge in New York City, a record deluge on the Front Range in Colorado, routine high tide flooding in Hampton Roads, Virginia and in South Florida, or diminished shellfish harvest in Oregon and Washington state.

Therefore, we urge you to continue the federal government's defense of the Clean Power Plan, a well-considered and critical rule that reasonably limits emissions from fossil-fueled power plants, our nation's largest source of carbon pollution. We joined in EPA's defense of the Clean Power Plan in court mindful of the grave threats that carbon pollution poses to our residents, economies, infrastructure, and natural resources. The Clean Power Plan builds on successful strategies that states, local governments and the power sector have used to cost effectively cut greenhouse gas emissions from power plants, while at the same time creating jobs and growing our economies. It establishes a nationwide framework to achieve substantial reductions of carbon-dioxide emissions while providing states and power plants the flexibility to decide how best to achieve these reductions. The rule is expected to eliminate 870 million tons of greenhouse gases by 2030, equivalent to the annual emissions of about 160 million cars. And the rule satisfies EPA's legal obligation under the Clean Air Act to limit harmful pollution from power plants that endangers public health and welfare.

We also write in response to a December 14 letter from West Virginia and other states to Vice President-Elect Pence and congressional leaders urging that your incoming Administration unravel the Clean Power Plan by taking action in court to formally withdraw it and issuing a "day one" executive order declaring the rule to be unlawful and prohibiting EPA from enforcing it. Following such a course would be ill-conceived and contrary to law, for several reasons:

First, the bases for such action, which the December 14 letter erroneously presents as settled law, are wrong and in fact have been disputed at length by the U.S. Department of Justice, our states, and many of the nation's leading businesses, among others, in pending litigation. To be plain, disagreements over the legality of the Clean Power Plan (or any similar rule) will have to be resolved by the judiciary one way or another. As the Supreme Court said not so long after the founding of our Nation, it is the duty of the courts to "say what the law is." *Marbury v. Madison*, 5 U.S. (1 Cranch) 137, 177 (1803). Here, the answer will likely come very soon. A federal court

of appeals is poised to resolve these legal questions. Indeed, on September 27, 2016, ten judges on the D.C. Circuit Court of Appeals heard nearly seven hours of oral argument from all sides. If the challengers are so confident in their oft-repeated claim that the Clean Power Plan is “unlawful,” why not let the court decide the claims that they themselves brought? Be assured that we would vigorously oppose in court any attempt to remand the Clean Power Plan back to EPA so late in the litigation, and prior to a decision from the Court on the merits of the claims. In addition, power plants are not subject to any carbon pollution reduction requirements under the Rule until 2022, allowing plenty of time for review by the U.S. Supreme Court, if necessary.

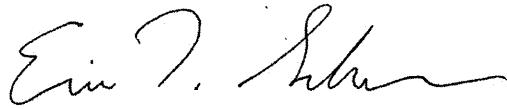

Second, the December 14 letter recommends that you issue an executive order on day one of your Administration declaring “the Rule is unlawful and that EPA lacks the authority to enforce it,” and instructing the agency “to take no further action to enforce or implement the Rule.” History and legal precedent strongly suggest that such an action would not stand up in court. Most famously, when President Harry Truman issued an executive order directing his Secretary of Commerce to seize the country’s steel mills to avert a labor strike, an action which was not authorized by statute or the Constitution, the Supreme Court invalidated the order. *Youngstown Sheet & Tube Co. v. Sawyer*, 343 U.S. 579 (1952). More recently, when President Obama’s administration sought to halt work on statutorily-required reviews of the Yucca Mountain project, the court ordered the government to continue the work with available funds, regardless of the President’s policy differences with the law. *In re Aiken County*, 725 F.3d 255, 259 (D.C. Cir. 2013). Similarly, an executive order purporting to nullify the Clean Power Plan would contravene EPA’s statutory obligation under Section 111 of the Clean Air Act. *See American Elec. Power Co. v. Connecticut*, 564 U.S. 410, 424 (2011) (“§ 7411(d) requires regulation of existing sources within the same category” being regulated under § 7411(b)). Further, EPA’s compliance with such an order would violate the notice and comment rulemaking requirements for suspending or rescinding a final rule under the Administrative Procedure Act and the Clean Air Act. *See Environmental Defense Fund, Inc. v. EPA*, 713 F.2d 802, 816 (D.C. Cir. 1983). Thus, rather than take executive action that would only lead to new litigation, the far more efficient path is to let the present litigation run its course.

Finally, we urge you to consult various stakeholders prior to committing to a course of action on climate change, which is damaging every area of the country. *See* 80 Fed. Reg. 64,510, 64,517-22 (Oct. 23, 2015) (describing harms states are facing). That damage is a powerful motivator for our states, counties, and cities—as well as the many cities such as Houston, Miami, and Salt Lake City, which are located in states challenging the Clean Power Plan but nonetheless support the rule—to develop and share solutions with the federal government.¹ For this reason, it is crucial that we have a seat at the table for any such discussions, so that you may hear from those states, counties, and cities with a successful track record modernizing the electricity sector and using innovative—and often market-oriented—solutions for cost-effectively reducing carbon pollution.

¹ *See* Brief of Amici Curiae the National League of Cities, U.S. Conference of Mayors, and 54 Cities, Counties, and Mayors in Support of the U.S. Environmental Protection Agency, in *West Virginia v. EPA* (D.C. Cir. No. 15-1363), Doc. No. 1606708 (filed Apr. 1, 2016).

In summary, we advocate that you reject misguided advice that the Clean Power Plan be discarded; advice that, if followed, would assuredly lead to more litigation. Instead, we urge you to support the defense of this critically-important rule and the implementation of its carefully-constructed strategies to reduce emissions from the nation's largest sources.

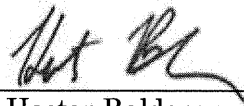

Sincerely,

Eric T. Schneiderman
